                                                                                                                                                                                                                                                                                                                                                               MISCELLANEOUS: There are seven antigenically distinct botulinum neurotoxin: Types A, B, C1, D, E, F, and G. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M27.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-[-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release results in flaccid paralysis, with frequent heart or respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                the treatment of strabismus and blepharospasm associated with dystonia and cervical dystonia. Also used for the treatment of hemifacial spasm and a number of other neurological disorders characterized by abnormal muscle contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               heavy chain (H).
SUBCELLULAR LOCATION: Secreted.
PHARMACEUTICAL: Available under the name BOTOX (Allergan)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       COFACTOR: Binds 1 zinc ion per subunit. SUBUNIT: Disulfide-linked heterodimer of a light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CATALYTIC ACTIVITY: Limited hydrolysis of proteins neuroexocytosis apparatus, synaptobrevins, SNAP25 detected action on small molecule substrates.

No detected action on small molecule substrates. COPACTOR: BLOGS I zinc ion per subunit (By similarity). SUBUNIT: DISULFIDE-LINKED HETERODIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE N-AND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL FORMATION AND TOXIN BINDING, RESPECTIVELY.
SUBCELLAUGAR LOCATION: Secreted.
MISCELLAUGAR LOCATION: SPECTED ANTIGENICALLY DISTINCT FORMS OF BOTULINUM NEUROTOXIN: TYPES A, B, C1, D, E, F, AND G.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M27.
                                                                                                                                                                                                                                                                                                                                                                                                   BIOL Chem. 269:1617-1620(1994).
FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALI: AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL COMPRETE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS.
INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC ENDOPETIDASE THAT CATALYZES THE HYDROLYSIS OF THE 180-ARG-|-ILI
                                                                                                                                                                                                                                                                                                                                                                     181 BOND IN SNAP-25.
CATALYTIC ACTIVITY: Limited hydrolysis of proteins

C. --- FUNCTION: Inhibits acetylchollne release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis.

C. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus of the diates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-|-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release crasults in flaccid paralysis, with frequent heart or respiratory cannot support to the cytosis. Supportation of proteins of the components. Support to support to the cytosis supportation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LERH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such is useful as a contraceptive and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                        Gonadotrophin releasing hormone; GnRH; synthetic immunogen; luteinising hormone releasing hormone; LHRH; contraceptive; promiscuous helper T-cell peptide epitope; immunomimic peptide epitoperast cancer; uterine cancer; gynaecological cancer; endometriosis;

The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Versinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is IHRH, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence represents an LHRH-containing immunogenic peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgen-dependent carcinoma, prostatic performs tertinoma endometricate heading intering tumours.

Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic immunogenic peptides are provided in which a universal immun stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of

                                                                                                                             cc as an autovaccine to induce a CTL response. Subdominant CTL epitopes, CC antibody binding regions and cysteine residues involved in disulfide CC bonds are preserved in the immunogenized forms. The method is used for CC inducing immune responses against weakly immunogenic cell-associated cell-associated cell-associated with cancers (PSM), Seq. human prostate specific membrane antigen (PSM), CC heregulin 2 (Her2) and/or fibrobhast growth factor 8b (FGF8b). The CC method comprises effecting simultaneous presentation by antigen producing CC cells (APS) of the animals immune system of: (1) at least 1 CTL CC (cytotxic T-lymphocyte) group derived from the PA and/or at least 1 CC first T helper cell group derived from the PA, and/or at least 1 CC first T helper cell group which is foreign to the animal. Analogues of human PSM, human Her2 and human/murine FGF8b comprising a substantial CC part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope are also claimed. CC The method is used to treat prostate, prostate/breast or breast cancer when the PA is human PSM, FGF8b and Her2, respectively.

CC Note: This sequence was constructed from the wild type human PSM (C (AAY92619), which appears on pages 184-187 of the specification.

The analogues have no residual CT MF activity and are immunogenic in a large proportion of the human CC population (by using promiscuous epitopes). The TNF-alpha analogue clis able to generate, in humans, neutralizing antibodies to wild-type human TNF alpha, has at least one fragment of TNF substituted by a peptide containing an immunodominant T-cell epitope, and at least one CC TNF-alpha B-cell epitope. The substitution causes a significant change cin the amino acid seguence of any one of the strands in the front containing any of the connecting loops or any of the B', I or D strands in the back beta-sheet. The TNF-alpha nanalogues are used as vaccines for treatment or prevention of diseases associated with excessive release cor activity of TNF-alpha, e.g. rheumatoid arthritis, Crohn's disease, diabetes, cancer of any sort, disseminated sclerosis, diabetes,

The composition comprises at least one modified immunogenic self-protein (selected from modified TNF-alpha proteins) and a surfactant capable of acting as a solubilizer. (I) is useful for preventing or treating a self-protein-mediated pathology such as an inflammatory disease, rheumatoid arthritis, an inflammatory bowel disease (ulcerative collitis or Crohn's disease), cancer, cachexia, multiple sclerosis, diabetes, psoriasis, osteoporosis or asthma. (I) is useful for inducing autoantibodies to a self-protein such as TNF (tumour necrosis factor)-alpha in a human subject. (I) comporising cetylpyridinium chloride as a component is useful for immunisation of a human subject or for treatment of a human inflammatory disease. The present sequence represents a human TNF-alpha analogue managements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel vaccine composition for prevention/treatment of self-protein-mediated pathology such as cancer, diabetes and asthma, comprises modified immunogenic self-protein and surfactant capable o

                                                                                                                                                                                                                                                                                                                     method comprises effecting simultaneous presentation by antigen producing cells (APCs) of the animals immune system of: (1) at least 1 CTL (cytotoxic T-lymphocyte) group derived from the PA and/or at least 1 B-cell group derived from the cell-associated PA; and (2) at least 1 first T helper cell group which is foreign to the animal. Analogues of human PSM, human Her2 and human/murine FGFBb comprising a substantial part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope are also claimed. The method is used to treat prostate, prostate/breast or breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY92627-49 are mutant immunogenized human prostate specific membrane antigen (PSM) constructs, which contain foreign epitopes (P2 and/or P30). The immunogenic analogues of PSM can be used in the claimed method as an autovaccine to induce a CTL response. Subdominant CTL epitopes, antibody binding regions and cysteine residues involved in disulfide bonds are preserved in the immunogenized forms. The method is used for inducing immune responses against weakly immunogenic cell-associated peptide antigens (PA) such as those associated with cancers (self-proteins), e.g. human prostate specific membrane antigen (PSM), heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b). The

                                                                                                                   CC as an autovaccine to induce a CTL response. Subdominant CTL epitopes,
CC antibody binding regions and cysteine residues involved in disulfide
CC bonds are preserved in the immunogenized forms. The method is used for
CC inducing immune responses against weakly immunogenize cell-associated
CC peptide antigens (PA) such as those associated with cancers
CC (self-proteins), e.g. human prostate specific membrane antigen (PSM),
CC heregulin 2 (Her2) and/or fibroblast growth factor 80 (FGF8D). The
CC cells (APC5) of the animals immune system of: (1) at least 1 CTL
CC (cytocxic T-lymphocyte) group derived from the PA and/or at least 1
CC first T helper cell group which is foreign to the animal. Analogues of human PSM, human Her2 and human/murine FGF8D comprising a substantial
CC part of all known and predicted CTL and B-cell epitopes of the respective
CC PA and including at least one foreign T helper apitope are also claimed.
CC The method is used to treat prostate, prostate/breast or breast cancer
CC when the PA is human PSM, FGF8D and Her2, respectively.
CC (AAY92619), which appears on pages 184-187 of the specification.

                                                     method comprises effecting simultaneous presentation by antigen producing cells (APCs) of the animals immune system of: (1) at least 1 CTL (cytotoxic T-lymphocyte) group derived from the PA and/or at least 1 B-cell group derived from the cell-associated PA; and (2) at least 1 B-cell group derived from the cell-associated PA; and (2) at least 1 first T helper cell group which is foreign to the animal. Analogues of human PSM, human Her2 and human/murine FGFBb comprising a substantial part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope are also claimed. The method is used to treat prostate, prostate/preast or breast cancer when the PA is human PSM, FGFBb and Her2, respectively.

Note: This sequence was constructed from the wild type human PSM (AAY92619), which appears on pages 184-187 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                              p30). The immunogenic analogues of PSM can be used in the claimed method as an autovaccine to induce a CTL response. Subdominant CTL epitopes, antibody binding regions and cysteine residues involved in disulfide bonds are preserved in the immunogenized forms. The method is used for inducing immune responses against weakly immunogenic cell-associated peptide antigens (PA) such as associated with cancers (self-proteins), e.g. human prostate specific membrane antigen (PSM), heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b).                                                                                  CC antigen (PSM) constructs, which contain foreign epitopes (P2 and/or CC P30). The immunogenic analogues of PSM can be used in the claimed method CC as an autovaccine to induce a CTL response. Subdominant CTL epitopes, CC antibody binding regions and cysteine residues involved in disulfide CC bonds are preserved in the immunogenized forms. The method is used for CC inducing immune responses against weakly immunogenic cell-associated CC peptide antigens (PA) such as those associated with cancers (2 self-proteins), e.g. human prostate specific membrane antigen (PSM), CC heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b). The CC (self-proteins) e.g. simultaneous presentation by antigen (PSM), CC heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b). The CC (cytotoxic T-lymphocyte) group derived from the PA and/or at least 1 CC (cytotoxic T-lymphocyte) group derived from the PA and/or at least 1 CC (cytotoxic T-lymphocyte) group which is foreign to the animal. Analogues of CC muman PSM, human Her2 and human/murine FGF8b comprising a substantial CC part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope are also claimed. The method is used to treat prostate, prostate/preast or breast cancer changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200020027-A2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sox
                                                                               treatment of allergy. The compound comprises at least one allergen cantigenic determinant (i) recognised by a B cell or an antibody secreted by a B cell of a non-atopic individual and at least one antipenic determinant (ii) different from the allergen that triggers T cell activation. (I) has antiallergic, antiasthmatic, antiinflammatory. Cermatological and immunosuppressive activities, and can be used in a vaccine. (I) may be used in a pharmaceutical or cosmetic medicament to treat and/or prevent allergies or a disease of allergic origin, cespecially hypersensitivities. These include rhinitis, sinusitis, componental asthma, atopic dermatitis, some forms of acute and chronic urticaria, gastro-intestinal syndromes associated with the ingestion of food allergens, oro-pharyngeal syndrome, anaphylactic reactions associated with drug hypersensitivities and/or a mixture of these. The use of (I) in the treatment of allergic conditions avoids the need for attempts the conditions are the conditions and the conditions at the conditions are the conditions and the conditions are the condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and othe gynaecological cancer), endometriosis, uterine fibroids, benign pros

                                                                                                                                                                              The present invention describes a compound (I) for the prevention and/or CC treatment of allergy. The compound comprises at least one allergen CC antigenic determinant (i) recognised by a B cell or an antibody secreted CC by a B cell of a non-atopic individual and at least one antigenic CC determinant (ii) different from the allergen that triggers T cell activation. (I) has antiallergic, antiasthmatic, antiinflammatory.
CC dermatological and immunosuppressive activities, and can be used in a CC vaccine. (I) may be used in a pharmaceutical or cosmetic medicament to CC treat and/or prevent allergies or a disease of allergic origin, CC especially hypersensitivities. These include rhinitis, sinusitis, CC bronchial asthma, atopic dermatitis, some forms of acute and chronic CC urticaria, gastro-intestinal syndromes associated with the ingestion of CC associated with drug hypersensitivities, anaphylactic reactions CC associated with drug hypersensitivities and/or a mixture of these. The CC associated with drug hypersensitivities and/or a mixture of these. The CC art drug therapies alleviate symptoms, but do not influence their CC art drug therapies alleviate symptoms, but do not influence their CC causes, however (I) actually combast the cause of an allergic reaction. The present sequence represents a specifically claimed compound peptide CC sequence from the present invention.
